

Powered by Autopilot

When approvals vanish, accountability goes with them

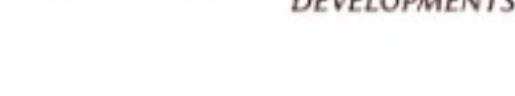

If your approvals live in inboxes, chats, and hallway conversations, visibility disappears - and risk creeps in. Autopilot brings every decision into one visible, policy-driven workflow.

Trusted by teams who value control, clarity, and compliance

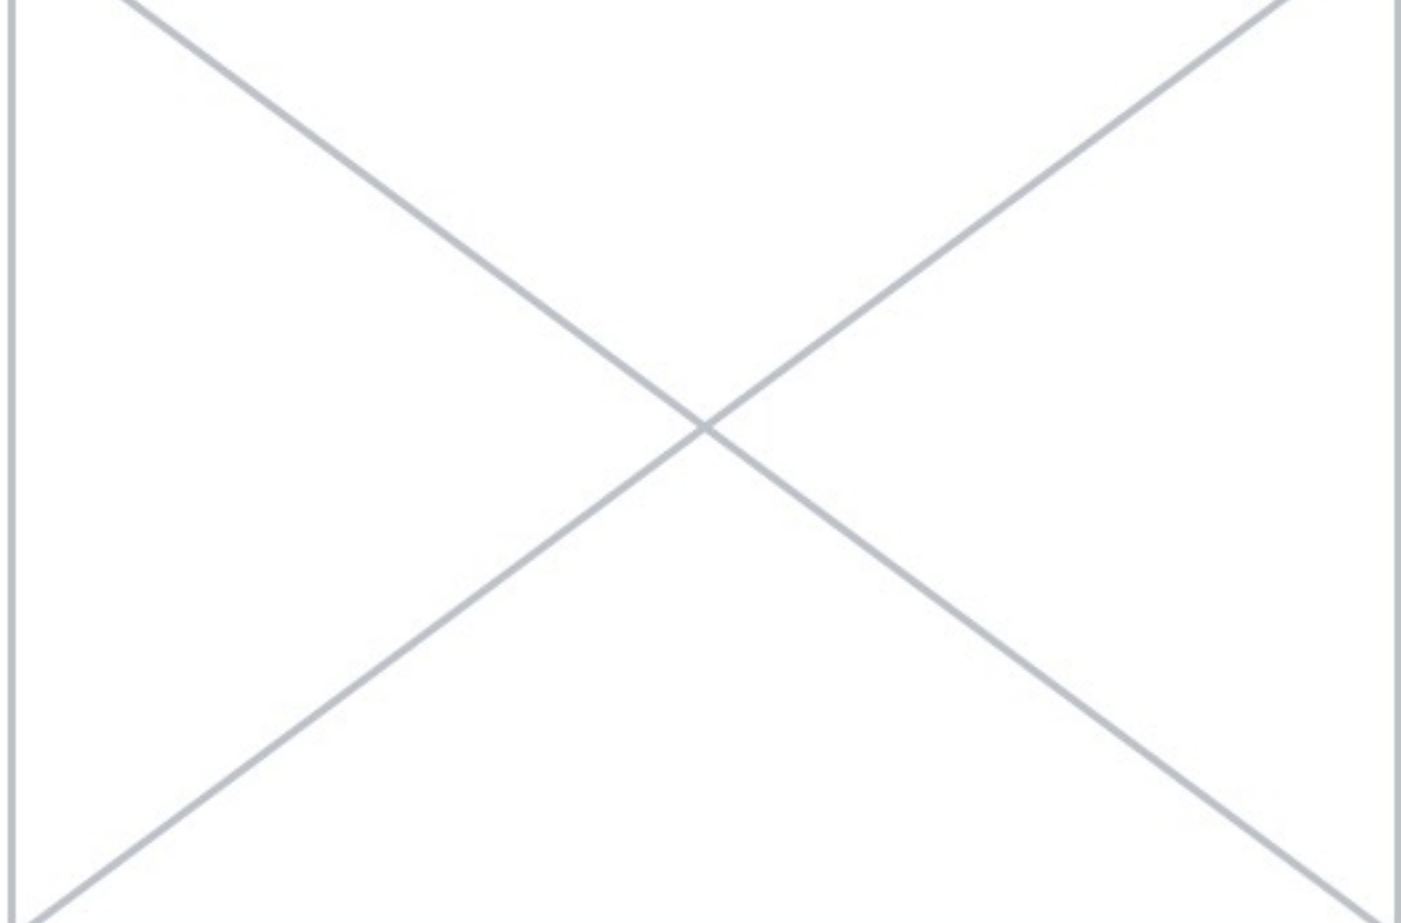

The approval bottleneck is real

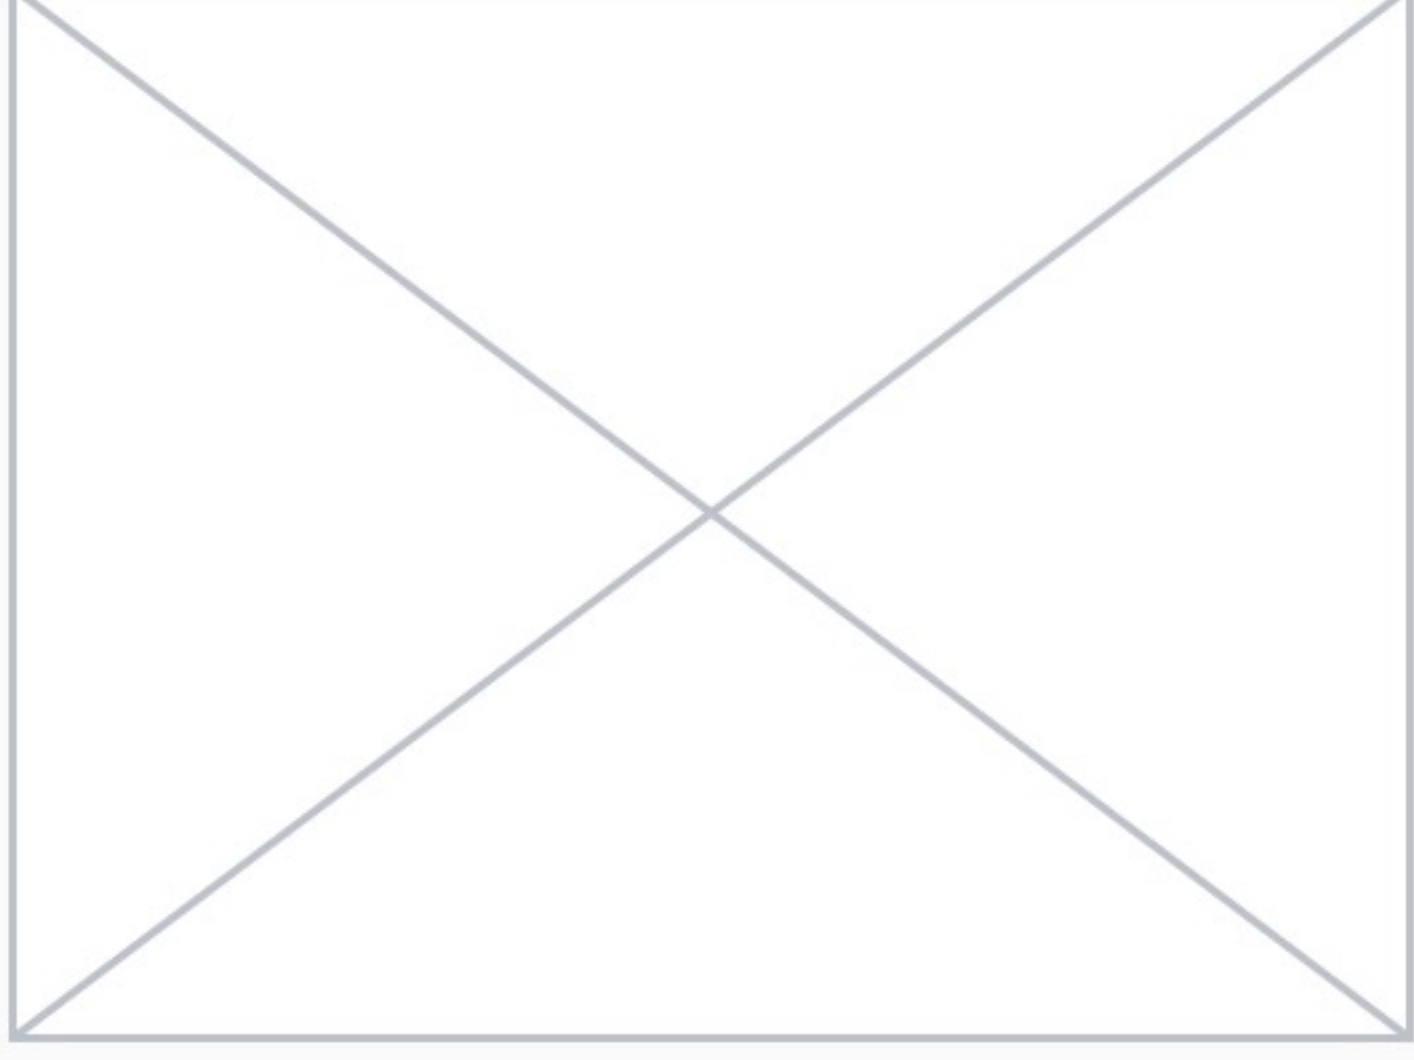

When requests sit in inboxes or get lost in side-conversations, teams slow down. What starts as a simple “Can you approve this?” quickly becomes:

- Vanishing requests buried in email threads
- No ownership when everyone is CC'd
- Policy gaps and inconsistent decisions
- Slow turnarounds and stressful audit trails

As your organization grows, so does the risk.

Make every approval visible, auditable, and controlled

Autopilot brings all requests into one structured, policy-driven flow. No more chasing staff, no more lost context, and no more manual rework.

With Autopilot Approvals, you can:

- Automatically extract document details with AI-powered capture
- Route requests by rules, roles, departments, or thresholds
- Keep momentum with protected reassignment
- Capture every decision in a timestamped audit trail
- Approve from Web, Email, Microsoft Teams, or Mobile

Fewer emails. Faster decisions. Stronger compliance.

See How It Works

Key Features That Matter

Autopilot Approvals turns complex approval chains into clear, compliant, and audit-ready workflows.

AI-Powered Capture

Upload a document and let Autopilot extract the details - reducing data entry errors and saving time.

Policy-Based Routing

Enforce your approval hierarchy consistently based on roles, departments, or financial thresholds.

Protected Reassignment & Escalation

Maintain SLAs while ensuring approvals only move to permitted peers or managers.

Change Requests & Resubmits

Correct issues without losing the original history or context.

One-Click Reject/Cancel

Capture mandatory reasons for a clean, audit-ready trail.

Built-in Notes

Keep conversations attached to the request - not lost in separate chats.

Audit-Ready Visibility

Every action is recorded, timestamped, and accessible for audits.

Automatic Archiving

File documents and trails directly into your DMS or finance systems.

Works with the tools your team already uses

- **In Microsoft Teams:** Approve, comment, or reassign requests directly inside Teams..
- **SharePoint & Document Management:** Autopilot automatically stores documents and audit trails in your central repository.
- **Finance Systems:** Sync approvals with platforms like Xero and QuickBooks (with more integrations coming).

How Autopilot Approvals Works

Effortlessly integrate and automate your approval workflows in four simple steps.

1

Define Your Workflow

Map roles, routing rules, thresholds, and escalation paths.

2

Submit Requests

Employees upload documents or complete request forms - with AI auto-filling key details.

3

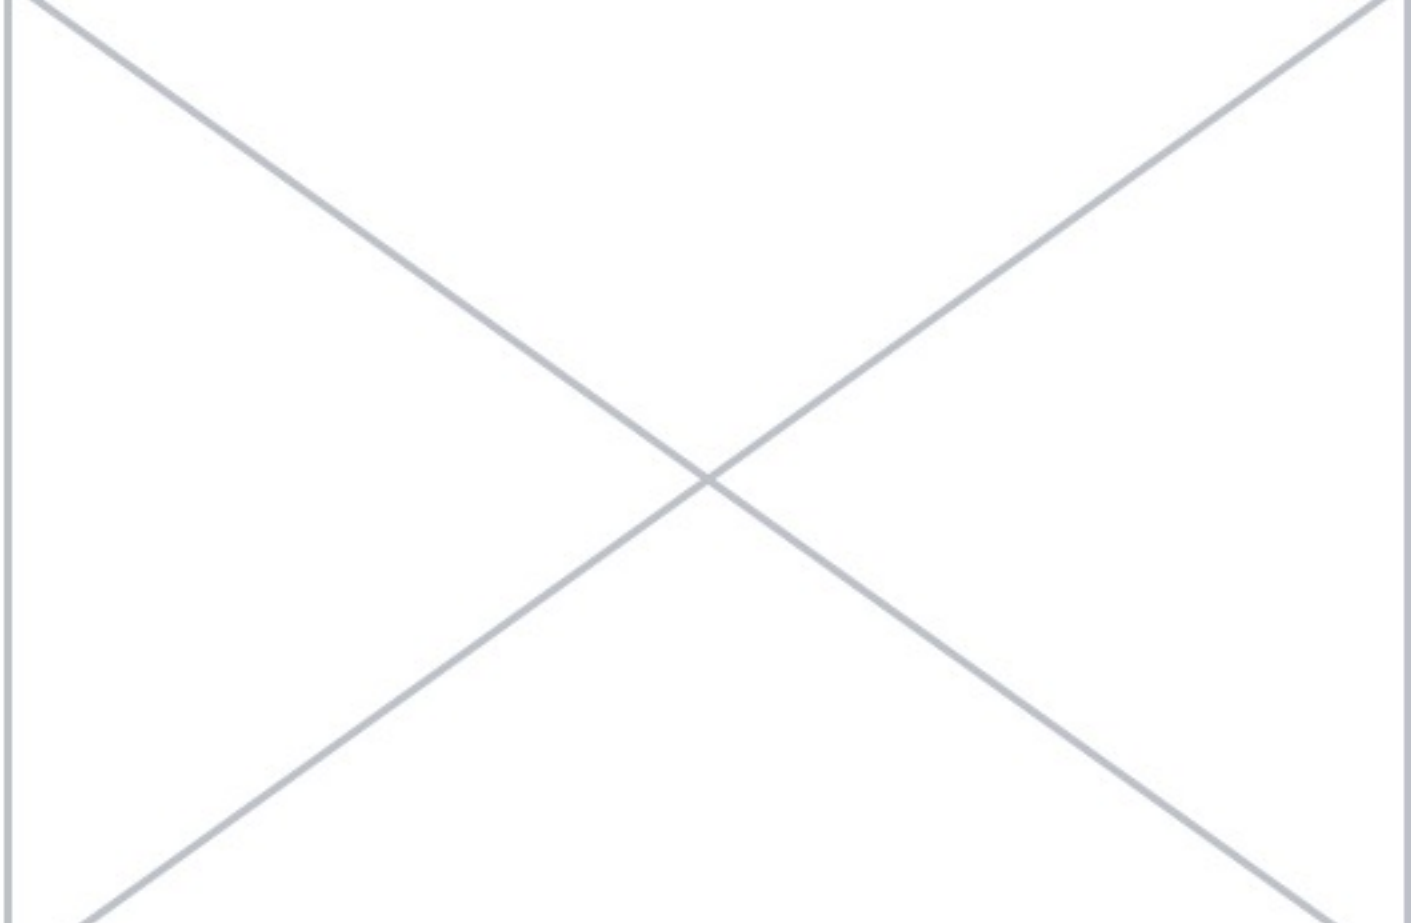

Automated Approvals

Autopilot routes every request based on policy, sending reminders to keep things moving.

4

Track & Report

View the full audit trail instantly, export reports, and maintain compliance effortlessly.

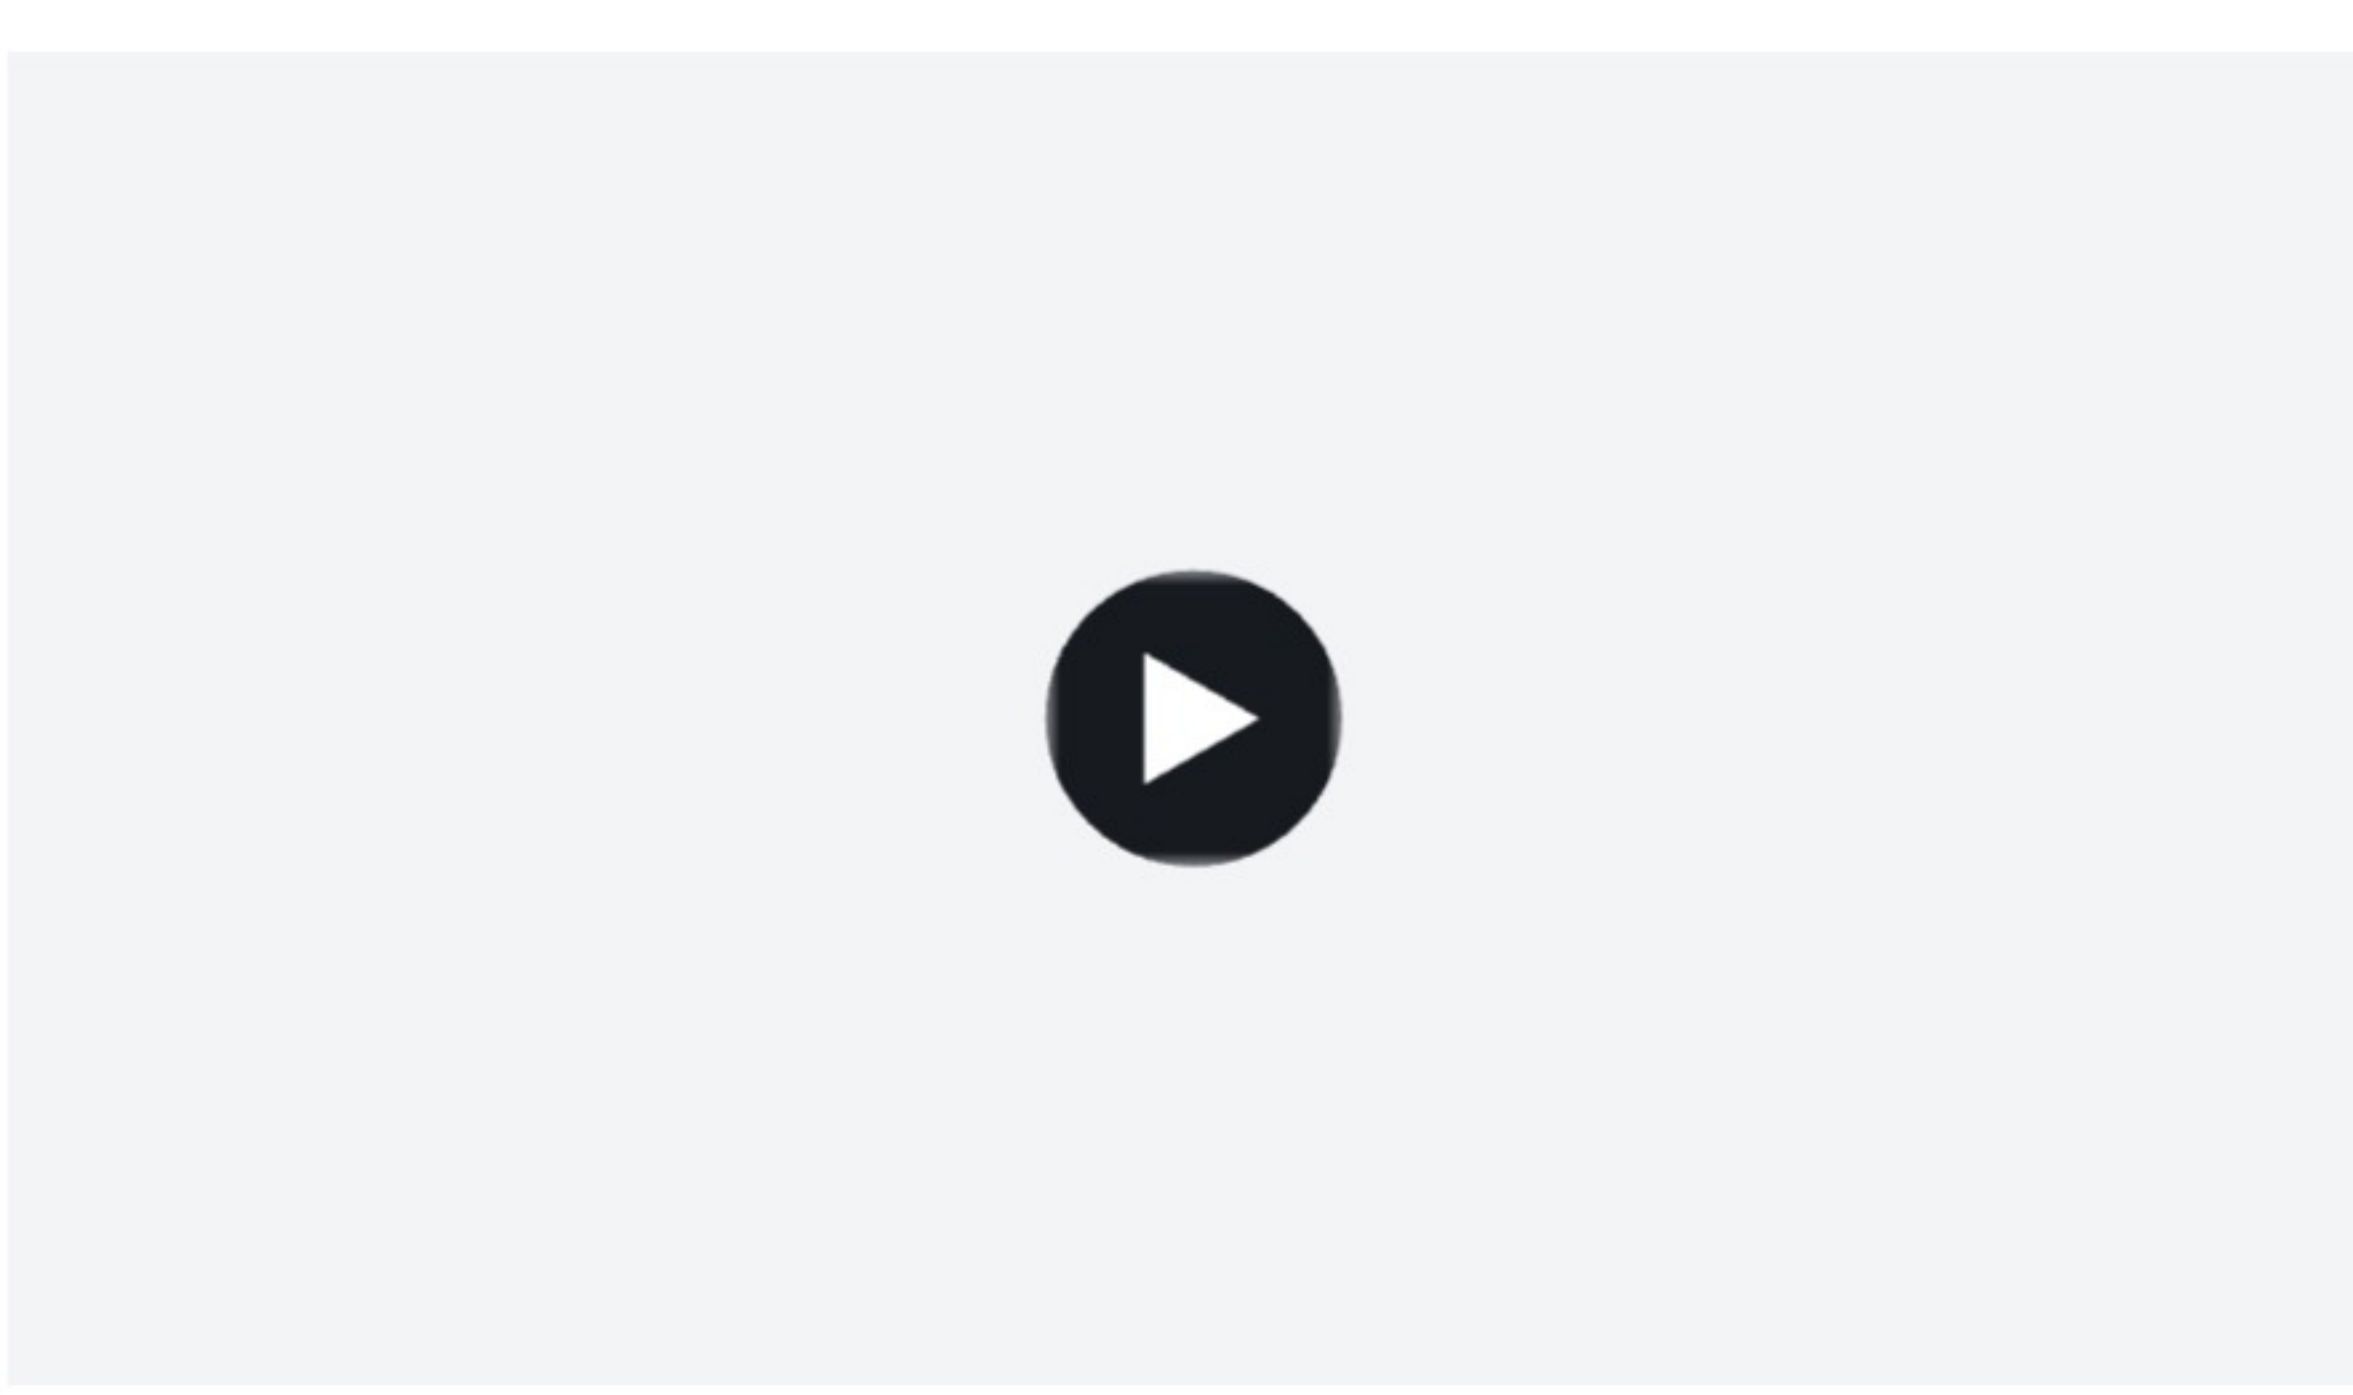

Talsure: Approvals for 1,200+ employees now inside Microsoft Teams

- Reduced ERP licence costs for managers
- Faster approvals without needing to log into finance systems
- Significant time savings on manual rework
- Mobile-friendly approvals used across the organization

Talsure replaced rigid ERP workflows with Autopilot's flexible approval process, making procurement faster, cleaner, and far easier to manage.
